

AGRICULTURAL Science

Sunrise Elementary

Our Program

The agricultural science program promotes a better understanding of the living environment, research, and training on the development of agricultural productivity and farming. Students will study animals, their habits, their traits, and their roles in the environment. Learners become critical thinkers, make cross-curricular connections, and increase supplemental experiences while creating a positive and safe school environment to ensure that our students are successful academically and emotionally. The agricultural science program allows students to have direct interaction with nature when growing and harvesting crops and raising and caring for animals as part of their curricular activities. We are growing LEADERS!
